AR is a market leader for Broadband High Power Solid State and TWT, RF and Microwave Amplifiers for high power applications in Commercial, Military and Research environments

- RF Amplifiers from 1 to 50,000 Watts, DC to 1GHz
- Solid State & TWT μWave Amplifiers from 1 to 16,000 Watts, 0.8 to 45GHz
- Wideband Hybrid Modules
- Tactical Military Radio Booster Amplifiers
- OEM Modules for Radio Comms, WiMax & WiFi
- EMC/EMI Measurement Receivers

All AR products are backed by a global support system for you today, tomorrow and always. AR supports its products with the strongest, most comprehensive warranty in the

ETM is your perfect partner for tailored power, linear, high voltage, high current systems.

ETM's expertise in the design, build and test of high power conversion electronics is the core of every ETM product with their high-power transmitters providing megawatts of pulsed RF for the highest precision tracking radars.

ETM's SATCOM amplifiers cover:

- All uplink bands including C, X, Ku, DBS & K-Band
- Powers from 125W to 20kW
- Dual-band designs are available in standard 400W versions

Their compact, modular switch-mode power supply design enabled a dramatic reduction in the size and weight of high power microwave amplifiers for commercial and military satellite communications.

Recent developments include expansion to support fast developing medical, industrial, and alternative energy markets utilising ETM's heritage and reliable power conversion expertise.
Diconex have been manufacturing microwave components for over 30 years. Their vast experience of thin film and thick film technologies combined with advanced microwave design software tools are the keys to their range of innovative solutions, which includes:

- SMT & Chip Terminations, Resistors and Attenuators
- Stripline & Flangeless Terminations, Resistors and Attenuators
- Coaxial Loads from 1W to 1500W
- Coaxial Attenuators from 2W to 2500W
- Power Loads from 1,2kW to 50kW

Raditek provides solutions for the Wireless and Microwave Telecommunications Industry. Started in 1993 they continue to expand and evolve their comprehensive product ranges. Raditek's products are used extensively around the globe and can be found in military aircraft and ships, cellular base stations, microwave radios and every kind of amplifier, to broad band, multi-octave bandwidths. Their range includes:

- Isolators and Circulators
- Oscillators & Synthesizers
- Quad Hybrids, Couplers, Splitters & Combiners
- 57-64GHz Tx Rx SOC
- Filters, Limiters, Switches, Connectors etc
